BUSINESS PLAN

LogiFlow AI

The AI platform for modern logistics

A cloud-based SaaS portal for freight carriers,
manufacturing companies, and small and medium-sized businesses.

Domenick Collisi

Collisi · Augsburg · Bavaria

April 2026 · Version 1.0 · Confidential

1 Executive Summary

LogiFlow AI is a cloud-based SaaS platform that digitalizes the entire logistics process — from transport inquiry through insurance to invoice verification — in a single web application. The platform addresses a highly fragmented market of over 870,000 companies in the German-speaking region that still handle their transports today with phone, email, and Excel.

The product in a single sentence

A photo of a pallet — and three minutes later the transport is in place, including insurance, freight documents, and live tracking.

Core benefits

- **Photo-first capture:** Artificial intelligence recognizes pallet type, weight, and volume from a smartphone photo in 15 seconds.
- **One-click insurance:** Transport and cargo insurance in real time, connected to Hiscox, Baloise, and HDI via BiPRO APIs.
- **Automatic matching:** Suitable freight carriers are found in under two minutes — via the TimoCom API, Transporeon, and the platform's own network.
- **AI dispatching and invoice verification:** Route optimization reduces empty kilometers by roughly 30 percent. Incoming freight invoices are automatically checked and typically save four percent of transport costs.

Three subscription models

- **TRANSIT (€29–€79/month):** Individual transports for tradespeople and small manufacturing operations.
- **PROJECT (€199–€499/month):** Project business for machinery and plant engineering companies with multi-week supply chains.
- **LINE (€299–€2,500/month):** Line haulage for carriers with their own fleet and contract logistics.

Key figures at a glance

Metric	Value
Capital requirement Year 1	€245,000
of which funding possible	up to €66,500 grant + €125,000 KfW
ARR target Year 3	€3.2 million
ARR target Year 5	€9.5 million
Gross margin Year 3	~78%
LTV / CAC	5.8×
Exit target Year 4–5 (6–12× ARR)	€35–115 million

2 Company and Founder

Vision

LogiFlow AI aims to become the standard logistics platform for the German-speaking mid-market — an easily accessible portal that connects the fragmented transport market through artificial intelligence, makes it transparent, and prices it fairly.

Mission

Reduce transport handling from 90 minutes to three minutes. Every transport insured and documented. For customer sizes ranging from the solo tradesperson to the major freight forwarder — all in a single portal.

Founder profile

Domenick Collisi, 32 years old, is an independent logistics expert based in Augsburg. His operational experience from several years of work in freight forwarding, sales, and project handling is the foundation of the product concept: every feature of the platform addresses a real-world pain point he has personally experienced. Over the past months, Collisi has already implemented several technical projects of his own — including an AI-powered lead generation system, an n8n-based automation architecture, and a calculation tool — bringing with him the rare combination of industry knowledge and execution capability.

Legal form and headquarters

LogiFlow AI GmbH will be founded in the Augsburg area. The choice of the GmbH legal form (rather than UG) is deliberate: it signals credibility to business customers, facilitates the initiation of enterprise contracts, and is a prerequisite for later exit negotiations with strategic buyers.

3 Problem and Solution

The problem today

Despite existing software solutions, logistics in 2026 remains surprisingly analog. Four structural problems dominate the market:

3.1 Time expenditure per transport

An average transport order today requires 45 to 90 minutes of administrative work: sending photos via WhatsApp, calling three or four carriers, comparing quotes in an Excel spreadsheet, confirming the order by email, printing delivery notes and CMR waybills. Multiplied by hundreds of transports per month, this adds up to administrative overhead that particularly erodes the margins of small and medium-sized enterprises.

3.2 Insurance gaps

A carrier's statutory liability under CMR is limited to 8.33 Special Drawing Rights per kilogram — which, for a pallet of electronics or machine parts, is often only a fraction of the actual goods value. According to current estimates, roughly 40 percent of all SME transports are not adequately insured. When damage occurs, the shipper is left paying the difference.

3.3 Empty kilometers

The average empty-run rate of the German truck fleet is approximately 30 percent. This means: every third kilometer is driven without cargo — paid for by the carrier, burdening the environment, and ultimately making every transport more expensive.

3.4 Freight invoice verification

Shipping companies rarely verify incoming freight invoices systematically. Waiting times, toll adjustments, diesel surcharges, and special fees often pass through unchecked. Industry experience shows: roughly 4 percent of freight costs are recoverable — if only they were checked.

The solution: LogiFlow AI

The platform maps the complete workflow of a transport in a single, seamless flow — accessible via any browser and any smartphone, without installation, without IT rollout, without training overhead.

The workflow in seven steps

Step 1 — Photo capture (15 seconds)

The employee opens the web app and photographs the pallet. The AI recognizes the pallet type (EUR, Chep, disposable, mesh box, Düsseldorf, half or quarter pallet), counts the number of items, estimates volume and weight via reference objects, and automatically flags hazardous materials through OCR of UN numbers.

Step 2 — Transport data (30 seconds)

Origin and destination addresses are captured via autocomplete. Time period with pickup and delivery windows. Optionally a budget. Special requirements such as ramp, tail lift, ADR, or customs via dropdown.

Step 3 — Insurance (one click)

Based on goods value, route, and hazardous materials, the system automatically displays insurance options: standard CMR liability included, CMR-Plus at 0.15 percent of goods value, all-risk transport insurance at 0.35 percent of goods value. Completion in real time via BiPRO interface.

Step 4 — Matching (2–15 minutes)

The inquiry goes simultaneously to the TimoCom freight exchange, the platform's own carrier network, and the customer's preferred partners. Incoming offers are automatically ranked by price, reliability, rating, and CO_2 footprint.

Step 5 — Order placement

With one click, the order is awarded. The contract is generated automatically as a PDF with a qualified electronic signature. The driver receives a push notification with navigation to the loading point; shipper and recipient see a live ETA via browser link.

Step 6 — Loading and unloading

The driver documents the cargo with photo, GPS coordinate, and timestamp. The recipient signs digitally via fingerprint on the smartphone (electronic Proof of Delivery). Pallet exchange is recorded digitally and continued in the blockchain-secured pallet account.

Step 7 — Billing

The incoming freight invoice is automatically checked against the order. If matching, payment is forwarded to DATEV for release. If discrepancies exist, a color-coded ticket is sent to dispatch.
Total effort per transport: three to five minutes instead of 45 to 90. A reduction of more than 90 percent.

4 Market and Competition

Market size

With revenue of over €312 billion per year, the German logistics market is the third-largest industry in Germany after the automotive industry and trade. In the D-A-CH region (Germany, Austria, Switzerland), over 870,000 companies regularly rely on transport services. According to the Bitkom Digitalization Index 2025, the digitalization level of logistics-related SMEs is below 18 percent — the lowest value of all industries surveyed.

Target groups and market segments

Segment	Size DE	Pain points	Target subscription
Small SMEs and tradespeople	~650,000	No time for exchanges, overpayment	TRANSIT
Mid-sized manufacturing	~180,000	Excel chaos, insurance gaps	PROJECT
Small carriers (< 50 trucks)	~38,000	Empty runs, manual dispatching	LINE Basic
Large carriers and corporations	~4,200	SAP integration, cycle planning	LINE Enterprise

Competitors and positioning

The market is not empty — but it is fragmented, and no player covers the combination of AI vision, SME price point, and integrated insurance.

- **TimoCom** is Europe's largest freight exchange, but not a transport management system. TimoCom has neither photo capture, nor integrated insurance, nor an SME price point.
- **Transporeon (Trimble)** is the market leader in transport management for enterprise customers, but too complex and too expensive for SMEs.
- **sennder** is a digital carrier, but not a platform provider — it does not solve the dispatching problem of existing carriers.
- **FlowFact, Propstack, onOffice** and similar TMS solutions are either industry-specific for real estate/logistics, or too expensive for SMEs.

LogiFlow AI is complementary to these systems, not competing. API integration is explicitly planned and is simultaneously the foundation of an exit strategy toward TimoCom, Transporeon, or sennder.

Unique selling points

- **Photo-first workflow:** No other TMS in the German market recognizes pallets via AI from a smartphone photo.
- **Real-time insurance:** Uniquely deep integration into BiPRO systems of German insurers.
- **Three clearly differentiated subscription models:** No one today offers a solution that starts at €29 per month and scales up to enterprise SAP setup.
- **Blockchain-secured pallet account:** Ends the pallet-exchange dispute between shippers, carriers, and recipients.

5 Product and Subscription Models

Product architecture

LogiFlow AI launches as a responsive Progressive Web App (PWA). The initial focus is web-first — allowing a customer to get started immediately without app store installation, without IT approval, and without device management. The web app works equally on desktop, tablet, and smartphone. Native driver apps for Android and iOS will follow in Phase 2, as soon as offline operation in the truck (poor network coverage, loading bays, tunnels) becomes a prioritized requirement.

Why web-first?

- No app store approval processes — updates go live immediately.
- No installation overhead for customers — click the link, get started.
- Immediate support on all operating systems (Windows, macOS, Linux, ChromeOS, Android, iOS).
- Lower development costs in the MVP phase.
- PWA technology allows installation to the home screen — feels like an app on the smartphone.

The three subscription models in detail

TRANSIT — Individual transports

Target group: solo self-employed professionals, trade businesses, small manufacturers with 1 to 50 transports per month.
Price point: €29/month (up to 10 transports), €79/month (up to 50 transports), above that €2.90 per transport.
Scope of services:

- AI photo capture including pallet recognition, weight and volume estimation
- Automatic matching via TimoCom API and partner network
- One-click conclusion of transport insurance
- Live tracking and ETA via browser link
- Digital CMR waybill and loading protocol
- Export of invoices as PDF and CSV

PROJECT — Project business

Target group: machinery and plant engineering firms, construction, special manufacturing with projects lasting several weeks to months.
Price point: €199/month (up to 3 parallel projects), €499/month (unlimited projects) plus 0.5 percent handling fee with integrated insurance.
All features from TRANSIT plus:

- Project container: grouping of all transports, documents, insurances, and costs of a project
- Heavy-load and special-transport module with VEMAGS interface
- Route planning accounting for bridge heights, tonnage, construction sites
- Cycle planning Just-in-Time and Just-in-Sequence
- Budget controlling with target/actual comparison and warning thresholds
- Installation insurance up to acceptance (optional)
- Photo cargo protocol with GPS and timestamp — legally valid

LINE — Line haulage

Target group: carriers with their own fleet, contract logistics providers, in-house transport of corporate groups.
Price point: €299/month (up to 5 trucks), €899/month (up to 25 trucks), Enterprise from €2,500/month with SLA and dedicated support.
All features from PROJECT plus:

- AI route optimization with empty-kilometer minimization
- Dispatch cockpit with drag-and-drop assignment of orders to drivers and trucks
- Driving time recording per EU Regulation 561/2006
- Contract management for annual agreements with automatic price adjustment to diesel index and tolls
- Freight invoice AI for automatic verification of incoming invoices
- Bidirectional EDI integration with SAP TM and EWM, Transporeon, DATEV
- Native driver app for Android and iOS, offline-capable

Subscription structure and upselling

The three subscription models are designed to build naturally on top of one another. A TRANSIT customer who grows and takes on initial project business transitions seamlessly to PROJECT. A carrier that initially only responds as a matching partner to TRANSIT inquiries can add LINE to optimize its own dispatching. Combinations are expressly possible and are rewarded with pricing incentives.

6 Technical Architecture and Interfaces

Technology stack

Layer	Technology	Rationale
Frontend Web (PWA)	Next.js 14 + React + TailwindCSS	Responsive, SEO-capable, fast — runs on any device
Backend API	Node.js + NestJS + TypeScript	Type-safe, modular, scalable, good talent availability
Database	PostgreSQL + Redis Cache	ACID-compliant, multi-tenancy capable, GDPR
AI image recognition	YOLOv8 (own model, self-hosted)	Real-time pallet recognition, no per-photo API costs
AI dispatching and text	Claude API (Anthropic)	For dispatch logic, automatic replies, invoice verification
Routing and maps	PTV xServer (primary), OpenStreetMap (fallback)	PTV is the standard for truck routing in Germany
Hosting	Hetzner Cloud, Nuremberg/Falkenstein	German server location, GDPR, cost-efficient scaling
Billing	Stripe + SEPA direct debit	Automated subscription management, invoicing, dunning
Authentication	Keycloak + 2FA + OAuth 2.0	Enterprise-capable, single sign-on possible

Interfaces (API strategy)

LogiFlow AI positions itself as an integration hub. The platform does not replace existing systems — it connects them and closes the gap between them.

System	Interface	Benefit to the customer
TimoCom	TC Connect (REST)	Freight exchange, tracking, identity verification of partners
Transporeon	TMS Connect	Connection of large shippers that mandate Transporeon
DATEV	DATEVconnect online	Automatic booking of transport invoices
SAP TM / EWM	IDoc + OData	Enterprise integration with corporate customers
TomTom, Webfleet	.connect REST API	Live truck tracking for driver fleets
VEMAGS	Web portal integration + OCR	Electronic permit request for heavy loads
Toll Collect	Toll API	Toll calculation directly in the quote

Hiscox, Baloise, HDI	BiPRO standard interface	Real-time conclusion of transport and installation insurance
Own REST API	OpenAPI 3.1, OAuth 2.0	Third-party systems can use LogiFlow — platform effect

Security and GDPR

- All servers in Germany (Hetzner, ISO 27001 certified)
- Data encryption at rest (AES-256) and in transit (TLS 1.3)
- Role-based access control with 2FA for sensitive operations
- Daily encrypted backups with geo-redundant mirroring
- Data processing agreements (DPA) for all service providers
- GDPR-compliant deletion concepts and data subject access rights

7 Marketing and Sales

Go-to-market strategy

Sales follow a tiered model — from low-cost and scalable (TRANSIT) through consulting-intensive (PROJECT) to direct enterprise acquisition (LINE).

TRANSIT — Self-service & content marketing

- Google Search Ads on keywords such as freight carrier price comparison, ship a pallet, LKW partial load.
- Content marketing: SEO-optimized guides on CMR liability, pallet exchange, and hazardous goods for tradespeople.
- Cooperations with Chambers of Crafts and guilds — Collisi is already networked in Augsburg/Bavaria.
- LinkedIn and YouTube channel with practical logistics tips as an organic top-of-funnel.

PROJECT — Direct sales and reference customers

- Trade fairs: transport logistic Munich, LogiMAT Stuttgart — Collisi has fair experience.
- Direct outreach to machinery and plant engineering companies in Bavaria and Baden-Württemberg.
- Partnership with insurance brokers who sell industrial insurance — LogiFlow is sold alongside as a digitalization tool.
- Building 3–5 reference customers with case studies in the first 12 months.

LINE — Enterprise sales

- Outreach to mid-sized carriers via tele-sales and fair appearances.
- Proof of Concept (PoC) with a free three-month trial phase for carriers with more than 10 trucks.
- Integration partnerships with TMS consultants and SAP integrators who position LogiFlow as an add-on.

Customer acquisition costs (CAC) and unit economics

Segment	Avg. ARPU per month	CAC	LTV (36 months)
TRANSIT	€45	€90	~€1,400
PROJECT	€320	€680	~€9,500
LINE	€950	€2,200	~€28,000

Average LTV/CAC: 5.8× — significantly above the SaaS industry benchmark of 3× (McKinsey 2024).

8 Financial Planning

Five-year revenue forecast

Year	TRANSIT	PROJECT	LINE	Additional revenue	Total ARR
Year 1	65k	96k	91k	~18k	~€270k
Year 2	243k	423k	513k	~120k	~€1.3M
Year 3	648k	1.23M	1.60M	~380k	~€3.9M
Year 4	1.24M	2.20M	2.80M	~720k	~€7.0M
Year 5	1.89M	3.26M	4.20M	~1.25M	~€10.6M

Additional revenue comprises insurance commissions (10–15 percent of mediated premiums), API usage fees from third-party systems, and one-time integration projects with enterprise customers.

Capital requirement Year 1 — detailed budgeting

Position	Amount	Timing	Share
MVP development (TRANSIT module, web app)	€45,000	Month 1–4	18%
AI model training (pallet recognition)	€12,000	Month 2–5	5%
API integrations (TimoCom, insurers, DATEV)	€18,000	Month 4–6	7%
Development of PROJECT and LINE modules	€65,000	Month 5–10	27%
Legal (T&Cs, GDPR, insurance license)	€8,000	Month 1–3	3%
Marketing (SEA, content, fairs)	€35,000	Month 6–12	14%
Hosting, licenses, tools	€9,000	ongoing	4%
First sales employee	€28,000	Month 8–12	11%
Buffer and contingency	€25,000	—	11%
TOTAL Year 1	€245,000		100%

Ongoing costs from Year 2

Position	per month Year 2	per month Year 3
Personnel (development, sales, support)	€28,000	€65,000
Hosting and infrastructure	€1,800	€4,500
Marketing	€6,000	€18,000
Insurance, tax advisory, legal	€1,200	€2,200

Interest and amortization KfW	€800	€1,600
Monthly total	€37,800	€91,300

Break-even analysis

Based on an average contribution margin of approximately 78 percent after direct variable costs, the operational break-even is expected during the second fiscal year. Cumulative break-even (repayment of the initial investment) is planned for the middle of the third year.

9 Funding and Financing

Financing mix

The capital requirement of €245,000 in the first year is covered by a structured combination of grants, subsidized loans, and equity. The goal is to maximize the share of non-repayable funds and to avoid dilution through external investors.

Financing component	Amount	Type	Repayable?
Bavarian Digital Bonus Plus	€50,000	Grant	No
go-digital (BMWK)	€16,500	Grant	No
KfW Founders' Loan Program 067	€125,000	Loan	Yes, low-interest
Equity (bootstrap/pilots)	€53,500	Own funds	—
TOTAL	€245,000		

Details on the individual funding programs

Bavarian Digital Bonus Plus

This program of the Bavarian Ministry of Economic Affairs is optimally suited for LogiFlow AI due to its headquarters in Augsburg. Digitalization investments by SMEs are funded with up to €30,000 (Digital Bonus Standard) or €50,000 (Digital Bonus Plus). The rate is up to 50 percent of eligible costs. For LogiFlow AI, development costs, AI model training, and cybersecurity investments are particularly eligible. Application: approval must be obtained before any contract is awarded. Processing time: 3–6 weeks.

go-digital (Federal Ministry for Economic Affairs)

The federal program funds consulting and implementation services for digitalization. It covers up to 50 percent of costs, a maximum of €16,500 per company. Particularly eligible are modules on digital market development, digitalized business processes, and IT security. Important: the funding must be processed through an authorized consulting firm.

KfW Founders' Loan StartGeld (Program 067)

This subsidized loan provides up to €125,000 on significantly favorable terms. Features: two years interest-free (redemption-free), ten-year term, 80 percent liability release for the house bank (which facilitates approval). Effective interest rate currently around 4.5 percent per annum. The application runs through the house bank, which forwards it to KfW. Particularly important for LogiFlow AI: NO finished product needs to exist — a convincing business plan is sufficient, which is exactly what this document provides.

Further programs to review

- **INVEST grant for venture capital (BAFA):** If a business angel invests, they receive 25 percent of their investment back as a grant. This makes LogiFlow AI particularly attractive for angel investors.
- **ERP Founders' Loan Universal (KfW 073):** If the capital requirement in later years exceeds €125,000, up to €5 million is possible.

- **BayernKapital / Coparion:** Publicly funded venture capital funds investing in Bavarian and German tech startups respectively — relevant for later financing rounds from Year 2 or 3.
- **DeepTech & Climate Fund:** For AI technology and mobility solutions, fitting in Year 3+ once the AI component matures.

Prioritized timeline for funding applications

Timing	Program	Action
Month 1	Digital Bonus Bavaria	Online application after company registration. Await funding approval before development begins.
Month 1–2	KfW 067	House bank meeting in Augsburg (Sparkasse, VR-Bank, Commerzbank). Present business plan.
Month 2	go-digital	Select authorized consulting firm, submit application together.
Month 6+	INVEST (BAFA)	In parallel with angel acquisition. Application to be filed by the investor.
Year 2–3	BayernKapital / DTCF	Prepare Series A round once €1M ARR is reached.

10 Roadmap and Milestones

Phase 1 — MVP (Month 1–4)

- GmbH founding and registration in Augsburg
- Funding applications: Bavarian Digital Bonus, KfW 067, go-digital
- TRANSIT module live as web app
- AI pallet recognition (YOLOv8) trained on 10,000 images
- TimoCom API integration (read-only for MVP)
- First insurer connection (Hiscox or exali via BiPRO)
- Five pilot customers from Collisi's Augsburg network

Phase 2 — Market Fit (Month 4–9)

- PROJECT module live
- DATEV interface (invoice export)
- Native driver app (Android/iOS) version 1
- Trade fair presence at transport logistic Munich (March)
- 150 paying customers, €200,000 ARR
- First sales employee

Phase 3 — Scaling (Month 9–18)

- LINE module live
- SAP integration (IDoc/OData)
- Expansion to Austria and Switzerland
- Three enterprise customers with SLA contracts
- Second sales and first customer success employee
- 800 paying customers, €1.3M ARR

Phase 4 — Exit preparation (Month 18–36)

- First discussions with TimoCom, Transporeon, sennder
- Professionalization of finance and reporting, auditor certification
- Engagement of an M&A advisor upon exceeding €3M ARR
- Ideal case: two parallel bidders for term sheet negotiation

11 Risk Analysis

Technology risks

- **AI photo recognition quality:** Mitigation through iterative training, manual correction workflow, and fallback to user confirmation.
- **Dependence on third-party systems (TimoCom, insurers):** Mitigation through contracts with multiple partners per category; no single point of failure.

Market risks

- **Market entry by a corporation (SAP, Microsoft) into the SME segment:** Mitigation through fast market penetration, lock-in via integrations, exit option.
- **Slow adoption among SMEs:** Mitigation through focus on a very low price point (€29), free trial phase, measurable ROI argumentation.

Regulatory risks

- **EU AI Regulation (Artificial Intelligence Act):** Our AI use cases are expected to fall into the low-risk category. Compliance will be built up early.
- **Insurance brokerage:** Connection via existing broker licenses or tied-agent models — no separate trade license as an insurance intermediary required in the startup phase.

Personnel risks

- **Founder key-person dependency:** Mitigation through early documentation, key-person insurance from Year 2, gradual team expansion.
- **Talent acquisition in Munich/Augsburg:** Mitigation through remote-enabled work and cooperation with local universities (Augsburg University of Applied Sciences, University of Augsburg, TU Munich).

12 Exit Strategy

A clear exit strategy is not optional — it is a strategic necessity, to make the right decisions from day one. For LogiFlow AI, three realistic exit scenarios are available:

Scenario A — Strategic sale to TimoCom

TimoCom is Europe's largest freight exchange and is technologically vulnerable in two respects: no AI features and no SME product. LogiFlow AI closes both gaps. An acquisition would instantly catapult TimoCom into the SME market and deliver an AI story for its next financing round.

Scenario B — Sale to Transporeon / Trimble

Transporeon is the market leader in enterprise TMS but has never built a compelling SME solution. LogiFlow AI as a bottom-up acquisition would complete their portfolio downward.

Scenario C — Private equity takeover

Logistics SaaS is an active investment theme among European PE funds (Triton, Waterland, EQT). Starting at €5M ARR, LogiFlow AI becomes relevant to this buyer group.

Valuation

Current M&A multiples in logistics SaaS are between 6× and 12× ARR, with above-average growth reaching 15× to 20×. For LogiFlow AI, this yields the following valuation window:

Scenario	Year	ARR	Valuation
Conservative	Year 3	€3.9M	€23–47M
Realistic	Year 4	€7.0M	€42–84M
Optimistic	Year 5	€10.6M	€64–170M

13 Next Steps

In the next 14 days

- Secure domains (logiflow.ai, logiflow-ai.de, collisi-logistics.com)
- Schedule a notary appointment for the GmbH founding
- Finalize pitch deck for banks and first pilot customers
- Approach three potential pilot customers from own Augsburg network
- Request developer access to the TimoCom API
- Bavarian Digital Bonus: prepare application documents
- Engage one or two freelance developers for the MVP phase

In the next 60 days

- Register GmbH and open first business accounts
- House bank meeting on the KfW founders' loan in Augsburg
- Consultant appointments for the go-digital application
- Start of MVP development of the TRANSIT module
- Start of AI training data collection (pallet images from pilot customer warehouses)
- First discussions with insurance brokers for BiPRO connection

LogiFlow AI is a realistic, actionable venture. The market is large, the competition has identifiable weaknesses, the technology is available, and the financial framework — in particular the Bavarian and federal funding programs — allows for a risk-aware start with manageable equity investment.
